

AI Across Industries

GROUP ACTIVITY BULLETIN · STEPS 1–4

Where commercial AI actually shows up — and what changes in the business because it exists.

COVERED: MUSIC · MARKETING · SOFTWARE DEV.
FOCUS: COMMERCIAL VALUE · PROCESS CHANGE · FUTURE POTENTIAL

STEP 1 · TOOLS WE BROUGHT — WHAT IT IS, WHO USES IT, WHAT IT SOLVES

EDUCATION Duolingo Max GPT-powered Video Call and Explain My Answer. Human expertise remains important when practice cannot scale.	MARKETING Canva AI generates designs and copy, giving creators and agencies faster ways to develop marketing ideas and materials.	SOFTWARE DEVELOPMENT GitHub Copilot / Claude Writes, explains, and tests code in the editor. Helps reduce time spent on development, testing, and bug fixes.	MUSIC INDUSTRY Suno AI Creates complete songs — vocals, instruments, lyrics, and mixing — from a text prompt in about a minute.
--	---	--	---

STEP 2 · WHAT MAKES AN AI APPLICATION COMMERCIALY VALUABLE

		FASTER DECISIONS	BETTER PREDICTIONS
		REVENUE GROWTH	RISK REDUCTION

OUR WORKING TEST
Value appears when AI turns a scarce human input into an abundant one — creative judgment, marketing time, engineering hours, or specialist expertise.

● MUSIC INDUSTRY Suno AI <i>A song from a sentence in a minute.</i> PROBLEM Music needs skill or money. Small businesses, game developers, and video creators may not be able to hire or license what they need. WHAT CHANGES Creation becomes a prompt-and-revise loop. The bottleneck shifts from “can you play?” to “can you describe it?” WHO BENEFITS Non-musicians and creators get custom tracks. Session players face pressure on low-end commercial work.	● MARKETING Canva — Motivation AI <i>Copy with a predicted lift attached.</i> PROBLEM Copy is often written on intuition and judged after the fact. A/B testing is slow and usually compares only a few options. WHAT CHANGES Write → launch → measure becomes generate → predict → personalize in real time. The creative brief becomes a data input. WHO BENEFITS Marketing teams reduce dead campaigns; revenue owners gain measurable lift; customers receive more relevant messaging.	● SOFTWARE DEVELOPMENT GitHub Copilot / Claude <i>The AI pair programmer.</i> PROBLEM Engineering time is consumed by boilerplate, syntax lookups, and context switching instead of design and problem-solving. WHAT CHANGES The job moves from writing code to reviewing and directing it. Review and testing become the new bottleneck. WHO BENEFITS Developers spend less time on drudgery; managers gain throughput; businesses can move faster without matching headcount growth.
Changed investor belief that musician creation can become a consumer product. \$125M	Commerce revenue for Canva Dynamic Motivation. Vendor-reported figure. 3–5%	Enterprise trial also reported +8.7% pull requests and +15% merge rate. 55%

THE WORKSHEET'S MOST IMPORTANT QUESTION

What changes in the business because this AI exists?	MUSIC · SUNO AI BEFORE Creating music required musical knowledge, instruments, and significant time for composing and recording. AFTER Songs, melodies, lyrics, and vocals can begin from a simple text prompt.	MARKETING · CANVA BEFORE Teams spend time designing, brainstorming, and creating content before knowing what will work. AFTER AI can generate designs, images, text, and content from prompts, faster and with less manual effort.	SOFTWARE · COPILOT BEFORE Capacity scales heavily with headcount, much of it spent on boilerplate. AFTER Capacity shifts toward review throughput; hiring increasingly values people who can judge and direct code.
--	--	---	--

BOTTOM LINE · AI becomes commercially valuable when it changes the workflow, expands capacity, improves decisions, or opens access to work that was previously too expensive or difficult. The examples above are drawn from the supplied Group Activity material; reported figures are identified as vendor/company study figures where applicable.
